ABOUT ME

QA Engineer, Developer, and AI Enthusiast, with experience in software quality assurance, working across startups and consulting companies. Proficient in automated testing, with expertise in Cypress, Selenium and Playwright, ensuring the delivery of high-quality platforms to users. Experienced in creating unit, functional, and non-functional tests, bug documentation, and effective collaboration in agile teams.

Cypress Ambassador, passionate about quality, automation, and Artificial Intelligence applied to software development. Currently working hands-on with AI agents in day-to-day engineering. Exploring how to keep quality in human hands as agents take on more of the work, along with test automation in Cypress and Playwright.

Bachelor's degree in Computer Science and postgraduate degree in Data Science & Machine Learning. On the soft skills front, effective communication, teamwork, problem-solving, and adaptability.

PROFESSIONAL EXPERIENCE

Software Mind
06/2024 - Currently

QA Automation Engineer
Responsible for the platform's test automation strategy and end-to-end quality across the web application, Salesforce, and cloud integrations. Rebuilt the team's testing pipeline from the ground up, replacing a slow and flaky Zephyr Scale setup with an independent Cypress framework, later migrated to Playwright. Day-to-day QA work (validating features, bug fixes, and hotfixes, and writing test cases) runs through AI agents connected to the team's real tooling, with final quality calls kept in human hands.

Some of my responsibilities are:

- Designed and built a Cypress-based test automation pipeline from scratch, decoupled from the main codebase and running in a web environment
- Led the migration of the end-to-end test suite from Cypress to Playwright, using AI agents to accelerate test conversion while preserving coverage.
- Run QA validation through AI agents (Claude Code) connected via MCP to Jira, GitLab, cloud logs, the database, and the browser, from reading acceptance criteria to executing tests and posting evidence.
- Validate features, bug fixes, and hotfixes on the dev environment, issuing a clear pass/fail verdict with evidence for each ticket
- Collaborated in agile teams using Jira, working in sprints to plan and track activities
- Contributed to continuous improvement of QA processes within the agile methodology
- Test integrations across the web application, Salesforce, and cloud-based services (GCP Cloud Functions, HRIS and employer data integrations)
- Perform exploratory, integration, and regression testing across all platform surfaces

Octuspay
10/2023 - 06/2024

QA Engineer

Play the role of QA at a startup, responsible for documenting the system's main routes and ensuring the delivery of a high-quality platform to users through functional and non-functional testing. Additionally, contribute to the creation of automated and unit tests for the application.

Some of my responsibilities are:

- Creation of automated tests in Playwright and Typescript
- Continuous integration pipeline maintenance with GitHub Actions
- Creation of unit tests in JEST
- Creation of test cases and test scenarios
- Bug documentation
- Functional and non-functional tests

ETAURE
04/2023 – 10/2023

QA Engineer

Joined a growing software factory as the right hand to the company's sole QA, helping to build and structure the QA process from the ground up. Worked across multiple projects simultaneously, gaining hands-on exposure to different products, workflows, and testing needs. Enhanced skills in automated testing using Cypress and Selenium, while collaborating closely with the QA lead to identify and implement continuous improvement strategies across the team.

Some of my responsibilities are:

- Documentation, planning, and support for the QA structure across multiple simultaneous projects
- Survey of process flows and requirements
- Creation of automated tests in Cypress and Selenium in different projects
- Creation and maintenance of continuous integration pipeline with Bitbucket
- Bug documentation
- Creation of test cases and test scenarios

CONEXOS Consulting & Systems
06/2021 – 02/2023

QA Engineer

Joined as an intern, gaining first professional experience in QA, and was hired full-time upon completion of the internship. Gained hands-on knowledge in software testing and business operations at a technology company. As a Quality Analyst (QA), responsibilities included planning and developing test cases, creating test scenarios, documenting tests and the platform, running functional and non-functional tests, analyzing requirements, writing bug reports, and automating test cases using the Ghost Inspector tool.

Some of my responsibilities are:

- Creation of test cases and test scenarios
- Bug documentation
- Web Test Automation with Ghost Inspector and Selenium
- Functional tests
- Non-functional tests
- Exploratory testing and regression testing
- Black box testing

ACADEMIC EDUCATION

Postgraduate In Data Science & Machine Learning: Data Management Technology
XP Educational | 03/2024 - 01/2025

Bachelor's Degree in Computer Science
Vila Velha University (UVV) | 01/2019 - 12/2023

CERTIFICATIONS AND MORE

- ISTQB Certified Tester Foundation Level (CTFL)
- Create and Manage Cloud Resources
- End to End Testing with Cypress
- CCNA: Switching, Routing, and Wireless Essentials
- QA Career Training: processes and test automation
- CCNA: Introduction to Networks
- Complete Java: From Scratch to Professional
- Anthropic courses
    - AI Capabilities and Limitations
    - Claude 101
    - Claude Code in Action
    - Building with the Claude API
    - Introduction to agent skills
    - Model Context Protocol: Advanced Topics

Cypress Ambassador

02/2026

Community building, content creation, online support and moderation, event organization, company ambassador.

- Plugin Select, program to share my custom plugin for cypress: cypress-docgen
- Feature the new Studio AI for Cypress Team
- Ambassador Friday, weekly content about cypress

Cypress Conference 2026 Speaker

10/2026

Speaker at Cypress Conference 2026, Cypress's web conference, with the talk **"From Flaky to Reliable: Bringing Confidence Back to Your Test Suite"**. In the talk I covered why flaky tests happen, what they cost a team, and how to fix them using features already built into Cypress, later published on YouTube.
